Poppet Valve FAQs

1. Are different coils available on the smaller sized poppet valves?
Yes, but a special part number is required.
2. Is the manual override held captive in place?
Yes, the solenoid stem itself locates and holds the manual override in place.
3. Is there an option code for external piloting solenoid air valves?
The option code is 14A.
4. What are these valves best suited for?
These valves are particularly suitable for applications where high flow and cycle rates are required.
5. Is a lower watt solenoid operator available?
Yes, but a special part number is required.
6. Is field conversion from internal to external pilot supply possible?
Yes, in certain cases. Please consult factory.
8. Is it possible to convert NC to NO?
Yes, in certain cases. Please consult factory.
9. What is the cycle life of the poppet valves?
Recent tests have recorded 9 million cycles.
10. Are FKM seals available with the poppet valve?
No, they are not available.
11. Are poppet valves strictly used for air?
Inert gases can be used with these valves.
12. Can the internally piloted vacuum valve operate in an "open" circuit?
No, as stated, 9.8" of Hg is the minimum required.

Improve machine reliability and reduce unplanned downtime throughout the lifecycle of your machinery or processes.
